Jail Work Report - 1998

Executive Summary

Returning Value to Our Communities

The Jail Industries Board is proud to issue the first comprehensive report of work done by inmates in Washington jails which includes both labor hours and types of work performed. Actual and estimated figures were provided by jail managers from across the state. Twenty-three city jails provided information, including eight jurisdictions that gave detailed reports. Thirty-eight of the thirty-nine counties provided detailed information. These numbers add up to an impressive 2.9 million labor hours. Valued at minimum wage, these hours represent over \$15 million worth of work performed in 1998.

The great majority of work, 73% of all hours reported, went to offsetting costs of incarceration inside Washington jails. These 2.1 million hours represent an extremely large cost avoidance factor. The essential services provided by inmates lower operating costs. All but the smallest jails and temporary holding facilities work inmates in food service, laundry, and/or janitorial crews. Other common tasks include grounds and building maintenance. Over 788,000 labor hours were also returned to the community as either work for city and county government, or as labor provided to not-for-profit community organizations. This value-added work by minimum-security offenders outside the jails spanned a wide range of general labor tasks. Examples go all the way from courthouse grounds crews to warehouse workers for Habitat for Humanity. Work is performed through on going labor agreements, on an as-needed basis, and for special projects and emergency response situations.

Success Factors

Tight jail operating budgets make it difficult to start new ventures. The jail industries twist on a very old adage is that it takes money to save money. Much of the money required covers costs of supervision. Without adequate staffing, cities and counties cannot leverage the resource that inmate labor represents. The investment in one supervisor, whether a uniformed correctional officer or an agency staff member, is repaid with the labor of a five to ten worker crew. Many successful programs rely on partnerships with other agencies or organizations to help provide supervision or funding for supervision.

All jail work takes place in an environment significantly different from successful correctional industries programs at the state level. With only a few exceptions, the overall jail work context is one of overcrowded facilities, overtaxed infrastructures supporting basic food service and laundry needs, and a lack of dedicated jail industries space. The 1998 report shows that almost all work aside from jail operations support (laundry/foodservice/janitorial) is done by minimum-security crews that work off the grounds of the jail.

Jail Work Report - 1998

Successes

Overcrowding and basic physical plant issues will remain limiting factors to jail industries development efforts. It is possible to adapt spaces for industries use. However, many jails need all available space for emergency bed capacity. Despite the many challenges to employing jail inmates, there are also many success stories. More and more jails are making employment for inmates a high priority. Reasons vary - cost avoidance and cost recovery, reducing idleness, making community restitution a priority, providing inmates with better skills and work ethics for their transitions back into the community.

The most successful new venture in 1998 was a complex partnership between the Jail Industries Board, the Department of Ecology, the Department of Corrections, and 34 counties to establish or expand county litter and illegal dump cleanup efforts. Ecology provided grant funding and technical assistance to jurisdictions seeking to set up crews. The Jail Industries Board served as a central information point for jails, facilitating access to \$1.6 million in grant funds previously unavailable to them. The Board also provided informational "how-to" packages for setting up crews. Corrections contributed some funds for equipment and supervision. The overall result was 34 new litter crews and a model for future successes - partnerships, joint funding, and multi-level, multi-jurisdiction cooperation. One of the Board's top priorities is to replicate this formula for statewide salmon recovery efforts.

The Future

1998 and 1999 activity will bear fruit with more productive and more efficient jails in a number of areas. Grant County completed a new facility designed around inmate employment. Clark County invested in dedicated industries space, 10,000 square feet targeted for private sector employment at the Jail Work Center, currently under construction. The planned Yakima County Restitution Center will also have work as a primary focus. Other jurisdictions are seeking workspace adjacent to their facilities or within easy transport distance.

As 2000 approaches, the future for jail industries is unclear. Shortfalls in criminal justice, transportation, and public health funding will strain city and county governments to the limit. Jails will be fighting just to keep up with population growth as local leaders try to cut costs while preserving services. This challenging time also presents an opportunity to make the jail industries vision a reality. Through innovation and stakeholder partnerships between government, labor, the private sector, and community leaders, inmate labor can be maximized as an asset. By working together, we can offer training and skill building for inmates while reducing costs of government and providing more services through community based organizations. Forging new and stronger partnerships is the key to the future of jail industries in Washington.

<i>Total</i>	251,560	\$1,295,534

Data Notes: Entries in December are the actual total labor hours for all of 1998. Government Hours represents labor hours provided under contracts with city and county departments. NRF received \$192,000 from these contracts to help pay for the costs of the industries program. Community Service Hours were provided without charge to the non-profit agencies involved.

* Special Detention Facility—a minimum security facility primarily used for the housing of special populations of sentenced persons who do not require the level of security normally provided in detention and correctional facilities.
